

MIT 18.06 Practice Exam 1, Spring 2023
Strang and Horning

Your name: _____
(*printed*)

Student ID: _____

Recitation: _____

Problem 1 (10+4+4+10+6=34 points):

Record your answers in the allotted spaces. You may use the rest of this page and the following for your calculations.

- (a) Compute a new factorization of the matrix

$$A = \begin{pmatrix} 3 & 2 & 1 & 5 & 2 \\ 2 & 2 & 0 & 4 & 0 \\ 1 & 0 & 1 & 1 & 2 \end{pmatrix},$$

by adding linearly independent rows of A (in order from top to bottom) to the factor R_{new} and choosing the columns of C_{new} so that $A = C_{new}R_{new}$:

$$C_{new} = \begin{pmatrix} \\ \\ \end{pmatrix} \qquad R_{new} = \begin{pmatrix} \\ \\ \end{pmatrix}$$

- (b) Put an X next to the correct answer. The column space of A is

- (i) a line _____
- (ii) a plane _____
- (iii) the whole 3D space _____
- (iv) none of the above _____

- (c) Put an X next to the correct answer. The row space of A is

- (i) a line _____
- (ii) a plane _____
- (iii) a 3D subspace _____
- (iv) none of the above _____

- (d) Use $A = C_{new}R_{new}$ to compute Ax for the vector $x = \begin{pmatrix} 1 & 1 & 1 & 1 & 1 \end{pmatrix}^T$ in two steps:

$$R_{new}x = \begin{pmatrix} \\ \\ \end{pmatrix} \qquad Ax = C_{new}(R_{new}x) = \begin{pmatrix} \\ \\ \end{pmatrix}$$

- (e) If we multiply the “dot-product” way, $y = R_{new}x$ requires _____ dot product(s) between 5×1 vectors and $Ax = C_{new}y$ requires 3 dot product(s) between _____ $\times 1$ vectors.

(blank page for your work if you need it)

Problem 2 (16+4+4+12=36 points):

Record your answers in the allotted spaces. You may use the rest of this page and the following for your calculations.

- (a) Compute the factorization $A = LU$ of the matrix

$$A = \begin{pmatrix} 1 & 0 & 1 & 0 \\ 2 & 1 & 0 & 1 \\ 4 & 2 & 1 & 0 \\ 8 & 4 & 2 & 1 \end{pmatrix}.$$

$$L = \begin{pmatrix} & & & \\ & & & \\ & & & \\ & & & \end{pmatrix} \qquad U = \begin{pmatrix} & & & \\ & & & \\ & & & \\ & & & \end{pmatrix}$$

- (b) Put an X next to the correct answer. The matrix A is

(i) invertible _____

(ii) not invertible _____

- (c) The rank of A is _____.

- (d) Use $A = LU$ to solve $Ax = b$ for the vector $b = \begin{pmatrix} 1 & 1 & 0 & 1 \end{pmatrix}^T$.

$$x = \begin{pmatrix} \\ \\ \\ \end{pmatrix}$$

(blank page for your work if you need it)

Problem 3 (6+6+10+8=30 points):

Record your answers in the allotted spaces. You may use the rest of this page and the following for your calculations. Consider the matrix $A = LPU$ given by:

$$A = \underbrace{\begin{pmatrix} 1 & 0 & 0 & 0 \\ 0 & 2 & 0 & 0 \\ 2 & 0 & 3 & 0 \\ 0 & 3 & 0 & 1 \end{pmatrix}}_L \underbrace{\begin{pmatrix} 1 & 0 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 1 \end{pmatrix}}_P \underbrace{\begin{pmatrix} 1 & 0 & 2 & 0 \\ 0 & 2 & 0 & 3 \\ 0 & 0 & 3 & 0 \\ 0 & 0 & 0 & 1 \end{pmatrix}}_U.$$

- (a) The matrices L (_____), P (_____), and U (_____) are invertible. (Write True or False next to each).
- (b) Write A^{-1} in terms of L^{-1} , P^{-1} , and U^{-1} (without computing any numbers):

$$A^{-1} =$$

- (c) Consider the linear system $Ax = b$. What right-hand-side vector b should one choose so that the system has solution $x = (\mathbf{first} \text{ column of } A^{-1})$?

$$b = \begin{pmatrix} \\ \\ \\ \end{pmatrix}$$

- (d) Compute x , the first column of A^{-1} :

$$x = \begin{pmatrix} \\ \\ \\ \end{pmatrix}.$$
